PROFESSIONAL SUMMARY

3rd-year Digital Game Design student with hands-on experience in the complete solo development cycle, from prototyping to commercial Steam release. Specialized in Unity and C#, with a strong focus on multiplayer networking (Unity Mirror, Steam P2P) and 3D modeling. Proven ability to architect game mechanics, optimize systems, and successfully manage end-to-end product lifecycles as an independent developer.

TECHNICAL SKILLS

Programming & Logic:	C#, Object-Oriented Programming, Gameplay Programming, AI Behaviors, Game Loop Optimization
Engine & Tools:	Unity3D, Level Design, Rapid Prototyping, UI/UX Implementation
Networking & Co-op:	Unity Mirror, Steam P2P, Multiplayer Synchronization
Art & Audio:	Blender (3D Modeling, Texturing, Animation), 2D Asset Creation (Pixel Art), Audacity
Publishing & SDKs:	Steamworks, Google Play Console, IAP Integration, Ad Networks

FEATURED PROJECTS & EXPERIENCE

Independent Game Developer (Solo Indie Dev) - PC & Steam

2020 - Present

- MEDUSUS! (PC/Steam):** Developed a playable demo featuring complex prop-hunt and asymmetrical hide-and-seek mechanics from scratch within 3 weeks. Slated to participate with a playable demo in the upcoming **Steam Next Fest (October 2026)**. Architected core multiplayer synchronization via Unity Mirror.
- Frick It (PC/Steam):** Solely developed and commercially published a co-op survival title over a 1.5-year cycle; designed 100% custom 3D art assets and gameplay mechanics from scratch, integrated with Steam P2P co-op networking.

Academic Projects & Game Jams

- The Mindbreak:** Led a 4-person team in a high-stakes game jam; spearheaded core game design, architectural logic, and gameplay programming while delegating audio and visual pipelines.
- Albino And Curse:** Solo-programmed and designed a 2D turn-based RPG with Undertale-inspired pixel combat for a university module (2-person team; handled all programming and combat assets while collaborating on general 2D sprites), followed by an academic presentation.
- The Amber Path:** Engineered a 2D atmospheric narrative-puzzle jam game in a 2-person team under strict 48-hour constraints; spearheaded 100% of programming, puzzle logic, and interaction triggers while partner assisted with 2D art and concept.
- The Basement:** Developed my debut 3D top-down mystery-thriller jam game; completed a finished, narrative-driven atmospheric prototype featuring modular level design and fast state-machine programming under extreme time limits.

Mobile Game Development - Android

- Stick Of Duty: Zombies:** Programmed a 2D Call of Duty: Zombies-inspired ragdoll action game; launched initially as single-player and later integrated my first online multiplayer networking via external servers due to high player demand.
- Hypercasual Portfolio (Right Ball, MyTeammates, etc.):** Published multiple mobile titles on Google Play with IAP and ad mediation; migrated from Google Ads to Yodo1 MAS SDK after an industry event, maintaining developer communications and integrating diverse SDK pipelines.

EDUCATION

European University of Lefke

Expected Graduation: 2027

Bachelor's Degree in Digital Game Design | 3rd Year Student | **CGPA: 3.67 / 4.00**

LANGUAGES

Turkish:	Native
English:	Upper-Intermediate (Technical Working Proficiency)
